

APPLYING ADDITIVE MANUFACTURING TO YOUR MANUFACTURING

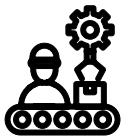

MassMEP

This program is created to provide a wholistic view of additive manufacturing and how it can improve your business. This will be done through real world examples as well as opportunities that currently exist in your manufacturing process.

MassMEP's customized approach, onsite advising and reflective conversation are ideal for manufacturers looking for how additive manufacturing can be applied to their operation.

Any and all companies should see what 3D printing can do for you – from startups to multi-national conglomerates. The program requires onsite learning for three 8-hour days.
